

OVERVIEW

Cloud Advisors is pleased to present Virtual Server, a cloud service modernizing legacy applications to run in the Cloud. Virtual Server is a Microsoft server that can be configured as a 2012 R2, 2016 or 2019 server. Virtual Server runs applications, databases, or IIS for web services. Virtual Server integrates with Virtual WorkSpace to create an extremely secure and isolated networking environment. Virtual Server is built on Cloud Hosted Platform providing security, performance, and accessibility to your applications from anywhere in the world.

FEATURES

- Virtual Server utilizes SSD drives for performance and reliability
