

|| CLOUD ADVISORS VIRTUAL SHARED DRIVE

OVERVIEW

Cloud Advisors is pleased to present **Virtual Shared Drive**, a secure file sharing, file server replacement service. **Virtual Shared Drive** enables businesses to store all their word, excel, pdf, PowerPoint and any other data generated in a secure, easy to access, secure AWS S3 bucket.

Virtual Drive uses a small, secure, lightweight client that installs on a PC or Mac. Once installed, a drive letter is presented for secure access to the data.

Virtual Drive utilizes HTTPS encryption for data that is in transit (any data sent over the internet). Virtual Shared Drive also encrypts the data, stored in a cache, on the local PC or Mac. Virtual Shared Drive data is stored in AWS S3 buckets that are encrypted with 256-bit Advanced Encryption Standard (AES-256).

FEATURES

- Adaptive synchronization only pulls down the content needed on each device for optimal storage efficiency
- Includes 500GB of Storage, easy to add additional storage
- Orders of magnitude more efficient in bandwidth consumption
- Anywhere Access
- No VPN Required
- Secure Collaboration
- Data is stored in AWS data centers located in Virginia and Oregon
- All data is encrypted at rest and in transit
- All data is replicated between AWS data centers
- All data is versioned controlled with a minimum of 10 versions per file
- Virtual Shared Drive supported devices:
 - Windows 7, 8, and 10 devices
 - Mac
 - Android tablets and phones
 - iPhone tablets and phones
